

Why Professional Building Systems, Inc. ?

Established in 2000, Professional Building Systems, Inc. ("PBS") is a leading manufacturer of modular structures, offering a wide variety of high-quality, custom built products. PBS markets, designs, engineers, manufactures, and services customized modular structures for the multi-family, adult living, hospitality, education, single-family, and light commercial markets.

The Modular Advantage...

"Build America's Future ... Today!"

www.pbsmodular.com

What is a modular home?

A modular home is produced in an environmentally controlled production facility and is built in two or more sections called modules. The individual modules are then transported and assembled on a permanent foundation at the building site.

Unlike a manufactured/mobile home, a modular home cannot be moved once it is set on the foundation. Modular homes are built to very stringent state and local building codes and are treated just like a traditional site built home, they offer outstanding custom features and their price per square foot is generally lower than the traditional stick/site-built home.

"Build Smart"

Modular Construction Advantages....

SUPERIOR STRENGTH – Homes are built with 1/3 more structural material for better strength and structural integrity than traditionally site-built homes.

EXCEPTIONAL QUALITY – The modular building process generates consistent building techniques, resulting in superior quality. All structures are built in a climate controlled environment so building materials are never exposed to the elements.

SPEED OF MODULAR CONSTRUCTION – Modular homes are typically built in about 1/3 the time needed to construct a site-built home. Site work and manufacturer can progress with the project simultaneously, the foundation and utility work can proceed as units are being built in the factory.

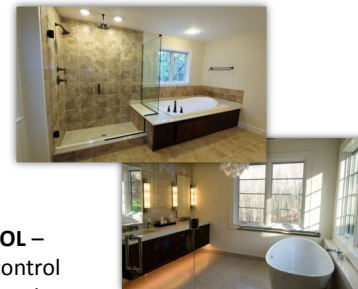

COST SAVINGS – Because modular homes are constructed faster and built in a controlled environment cost savings are natural. Compared to on-site construction, modular construction can save the consumer 10 to 20 percent, depending on the size and design of the structure. Cost savings can be accrued through production efficiency and bulk purchasing of construction materials.

FLEXIBILITY OF DESIGN – Hundreds of floor plans to choose from, all offering the flexibility of complete customization or the option of designing your custom plan with the in house engineering department. Each customers request is designed with durability, functional reliability and cost efficiency in mind.

SUPERIOR PRODUCT – The modular building process generates consistent building techniques, resulting in superior quality.

"Build Better"

DETAILS MATTER – Top brand materials, modern fixtures, trim and surfaces along with skilled Craftsman ensure that every detail of your project meets your expectations.

QUALITY CONTROL – Internal quality control systems, in conjunction with third-party agency inspections, are performed at every stage of the construction process to ensure that each module is compliant with state codes. A third party seal of approval is stamped on each structure before leaving the manufacturing facility.

EXCEPTIONAL SERVICE – Knowledgeable service technicians in house and in the field are available to troubleshoot and take necessary action.

ENERGY EFFICIENCY – Homes are 50% more energy efficient than the model energy codes.

10-YEAR STRUCTURAL WARRANTY – Every home comes with a written 10 year structural warranty.
